

Teamwork Makes Xstream Work

It happens at the worst times – movies buffering just as the bad guy shows up, downloads stuck motionless when you're on a deadline. *Yikes.*

We're bringing you faster-than-ever internet connections with Midco Xstream®, but did you know that you can help optimize your connection? Let's get streaming with these quick tips.

Modem Placement

- Place in open, central location.
- Keep elevated on table or stand.

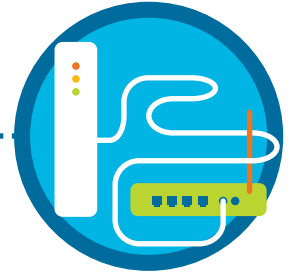

Technology Updates

- Clear internet history and cookies often.
- Update operating system when prompted.
- Remove older devices connected to your network, as they can slow down speeds for all devices.

Wireless Interference

- Be aware of potential wireless interference (Wi-Fi enabled scales, Bluetooth speakers, etc.).

Internet Equipment

- Make sure equipment is up-to-date and Midco-compatible.
- Regularly check cables for damage.
- Connection issues? Disconnect and reconnect modem cables one at a time.
- Change router channel if connection lags.
